The global Soft Exosuits market size is predicted to grow from US\$ 1057 million in 2025 to US\$ 3744 million in 2032; it is expected to grow at a CAGR of 19.9% from 2026 to 2032.

In 2025, global Soft Exosuit output reached about 180,000 units and global capacity of around 240,000 units. The average price is about USD 6,000 per unit, with gross margins near 38%. Soft Exosuits are wearable robotic assistive systems made primarily from flexible textiles, cables, elastomers, and lightweight actuators that augment, restore, or support human movement without the rigid frames used in traditional exoskeletons. They are designed to provide biomechanical assistance to joints such as the ankle, knee, hip, shoulder, or back while maintaining comfort, flexibility, and natural motion. Soft exosuits are used in medical rehabilitation, mobility assistance, industrial ergonomics, military load carriage, sports performance enhancement, and elderly care. The supply chain begins with upstream suppliers of advanced textiles, high-strength fibers (e.g., Dyneema, Kevlar), soft sensors, inertial measurement units (IMUs), force sensors, batteries, motors, cable-drive systems, pneumatic or artificial muscle actuators, microcontrollers, and embedded software. Midstream manufacturers integrate these components into wearable systems, develop motion-control algorithms, and conduct biomechanical testing and certification. Downstream channels include hospitals, rehabilitation centers, research institutions, industrial workplaces, defense organizations, sports training facilities, and healthcare providers, where the devices are deployed for mobility assistance, injury prevention, rehabilitation therapy, and human performance augmentation.

United States market for Soft Exosuits is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
