The global Soft Robot Grippers market size is predicted to grow from US$ 529 million in 2025 to US$ 995 million in 2031; it is expected to grow at a CAGR of 11.1% from 2025 to 2031.

Soft Robot Grippers are especially suitable for fine picking tasks. Combined with the concept of bionic design, soft grippers are applied to diversified industrial scenarios.

Traditional robot grippers are mostly rigid grippers. The limitation of rigid grippers is that the clamping force is usually uncontrollable. If the clamping force is too large, the object may be damaged during the grasping process, or scratches may be generated on the surface of the product; moreover, for some irregular shapes, it is easy to Objects that deform, rigid grippers and suction cups are difficult to grasp effectively. This also promotes the flexibility and softness of the robot gripper. At present, some manufacturers on the market have launched flexible grippers/soft gripper products, which have solved the problem of grasping special-shaped and fragile items to a certain extent, and made up for the vacancy that rigid grippers and suction cups cannot be used in some occasions.
