Soft serve is a type of ice cream that is softer than regular ice creams as a result of air being introduced during freezing.

Soft Serve Freezer is used to make Soft Serve Ice cream. Soft Serve Freezer may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture.

A Soft Serve Freezer has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete.

Global Soft Serve Freezer key players include Taylor, Nissei, Carpigiani, Electro Freeze, Stoelting, etc. Global top five manufacturers hold a share nearly 60%.

Asia Pacific is the largest market, with a share over 35%, followed by Europe, and North America, both have a share over 45 percent.

In terms of product, Multi Cylinder is the largest segment, with a share over 70%. And in

terms of application, the largest application is Catering Industrial, followed by Entertainment Venue, Shop, etc.
