Soft serve is a type of ice cream that is softer than regular ice creams as a result of air being introduced during freezing.

Soft Serve Freezer is used to make Soft Serve Ice cream. Soft Serve Freezer may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture.

A Soft Serve Freezer has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further

to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete.
