The soft shackle is a device made of 12 strands of rope, which forms a closed loop and can be opened by using a lasso and a large plug knot. These rope shackles are designed to reduce weight and have been used in many racing boats. But for classic yachts and sailors, these shackles also have advantages over metal Shackles: when connected to lifting ropes and sails, they can reduce the risk of injury and protect the mast surface. Under load, they are reliably pulled together and will not be accidentally opened.
