The global Soft Termination Capacitors market size is predicted to grow from US$ 2248 million in 2025 to US$ 7112 million in 2031; it is expected to grow at a CAGR of 21.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Soft-terminated capacitors are multilayer ceramic chip capacitors (MLCCs) that have a conductive resin layer between the copper and nickel plating of their terminals. The resin layer acts as a buffer, absorbing stress caused by temperature changes, bending, and other mechanical forces that can cause the capacitor to crack. This design improves the reliability and durability of the capacitor, making it suitable for applications where the capacitor is subjected to great stress, such as automotive electronics.
