Soft tissue dental diode lasers are ideal for procedures that involve cutting or contouring the soft tissue of the mouth. As a clinical tool, soft-tissue diode lasers offer a wide range of clinical treatment possibilities, as they enable precise cuts in the gums and other soft tissues, while also eliminating bleeding at the site and reducing the healing time of patients. Soft tissue lasers are ideal for grooving during preparation, sterilizing pulp canals, treating periodontal disease, and even teeth whitening. Many of the latest dental diode lasers are portable and easy to use with simple touchscreen controls.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
