Abstracts

According to this study, the global Software Defined Factory (SDF) market size will reach US$ 177615 million by 2031.

Software Defined Factory (SDF) is one of the development trends of intelligent manufacturing. The core concept is to comprehensively 'abstract' and 'define' the factory's production resources, processes, equipment and management through software platformization, modularization, virtualization and programmability, so as to achieve highly flexible, agile and intelligent operation of the factory. A Software Defined Factory (SDF) envisions a software layer that oversees machines, processes, workflows, assets across the entire plant, enabling the execution of manufacturing processes with a single click. This centralized system acts as an intelligent, configurable hub for routing, scheduling, and controlling operations, allowing the factory to adapt to dynamic demands. In collaborative SDF ecosystems, manufacturers can boost productivity by 30 to 50%.
