Software-Defined WAN or SD-WAN connects enterprise networks, like branch offices and data centers, over a large geographical area.

Traditional WAN connects locations using dedicated MPLS circuits, but this is expensive and does not work well for cloud-based systems. SD-WAN works to deliver a secure and simplified WAN connection by using a combination of traditional circuits (like MPLS, broadband internet, and 4G/LTE) and software-based technology. It can be used to deliver basic WAN connectivity, or premium business services like VPN, WAN optimization, and application delivery control (ADC).

The global Software-Defined WAN Solutions market size is projected to grow from US\$ 411.8 million in 2023 to US\$ 1024.3 million in 2030; it is expected to grow at a CAGR of 13.9% from 2024 to 2030.
