The global Software Maintenance and Support Services market size is predicted to grow from US\$ 1397 million in 2025 to US\$ 1924 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Software maintenance and support services comprise the ongoing activities required to keep software applications stable, secure, compliant and aligned with evolving business needs after initial deployment. In contrast to one-off development or implementation projects, these services focus on the full post-go-live lifecycle: fixing defects, updating software to reflect changes in technology or regulations, improving performance and usability, and providing day-to-day assistance to end users and IT teams. From a lifecycle perspective, maintenance typically includes four classic categories: corrective maintenance to resolve bugs and failures; adaptive maintenance to accommodate new operating systems, devices, databases, cloud platforms or regulatory requirements; perfective maintenance to enhance features, performance and user experience; and preventive maintenance such as refactoring and architectural hardening to reduce the risk of future incidents. Support services add an operational layer through service desks, multi-level incident and problem management, request fulfilment, monitoring, knowledge management and coordination with software vendors or internal development teams.

The software maintenance and support services market underpins virtually every stage of digital transformation, as organizations realize that building or buying software is only the starting point; keeping it operational, secure and up to date is a recurring, long-term commitment. Rapid growth in web and mobile applications, cloud and SaaS adoption, and increasingly complex hybrid architectures has made continuous maintenance and support a strategic priority rather than a back-office task. Enterprises in regulated

sectors such as banking, insurance and healthcare face additional pressure to maintain strict patching, auditability and uptime regimes, driving demand for structured maintenance programs and outsourced managed application services. At the same time, the shortage of skilled in-house engineers and the push to focus internal teams on innovation are encouraging firms to partner with specialized providers for application support and maintenance, often under multi-year SLAs.
