Soil biodegradable mulch film is an agricultural film designed to provide the benefits of traditional plastic mulch, such as weed suppression, moisture retention, and temperature regulation, while degrading naturally in the soil after use. Made from biodegradable polymers, these films break down into water, carbon dioxide, and biomass through microbial activity, leaving no harmful residues. They eliminate the need for removal and disposal, reducing labor and environmental impact. Soil biodegradable mulch films are particularly beneficial for sustainable farming practices and are used in various crops, including fruits, vegetables, and ornamental plants.
