Spinal Non-Fusion Devices are medical implants used in spine surgery to treat various spinal conditions without the need for fusion (permanent joining of two or more vertebrae). These devices are designed to preserve motion and flexibility in the spine while addressing issues like degenerative disc disease or spinal stenosis.

The market for spinal non-fusion devices is growing as patients seek alternatives to traditional spinal fusion surgeries. These devices offer potential benefits such as reduced recovery time and preserved spinal motion. Advances in materials and implant design have expanded the applications of these devices, making them an attractive option for spinal surgeons.
