Compared with other soil repair methods, the use of solidification and stabilization equipment for soil repair has many advantages. Among the entire set of soil curing and stabilization treatment equipment, the core function is the mixing and stirring machine, which fully stirs the contaminated soil with the curing agent. The performance of the curing agent is brought into play, so that the stability of the soil material molecules after the repair can be guaranteed, and secondary pollution will not occur, which meets environmental protection treatment standards.

The whole process of soil remediation solidification and stabilization equipment is simple to operate, and the equipment is cost-effective. On the premise of ensuring that the performance of the curing agent is high, the performance of the mixing and mixing equipment can be excellent to obtain a soil treatment material with very good treatment effect. The solidified soil has long-term stability, and long-term stability is achieved during and after disposal. Therefore, the use of solidification and stabilization equipment for soil restoration is an efficient and economical treatment method.
