The global Sol-Gel Coatings market size is predicted to grow from US\$ 12860 million in 2025 to US\$ 14550 million in 2031; it is expected to grow at a CAGR of 2.1% from 2025 to 2031.

A sol is a dispersion of the solid particles (~ 0.1-1 μ m) in a liquid where only the Brownian motions suspend the particles. A gel is a state where both liquid and solid are dispersed in each other, which presents a solid network containing liquid components. The sol-gel coating process usually consists of 4 steps:

- (1) The desired colloidal particles once dispersed in a liquid to form a sol.
- (2) The deposition of sol solution produces the coatings on the substrates by spraying, dipping or spinning.
- (3) The particles in sol are polymerized through the removal of the stabilizing components and produce a gel in a state of a continuous network.
- (4) The final heat treatments pyrolyze the remaining organic or inorganic components and form an amorphous or crystalline coating.

Europe and North America are the largest producer of Sol-Gel Coatings, with nearly 25% market share respectively. 3M, Dow, Axalta Coating System, Solvay and Henkel are the top 5 manufacturers of industry, and they had more than 40% combined market share.
