The global Solar Airfield Lighting market size is predicted to grow from US\$ 142 million in 2025 to US\$ 312 million in 2032; it is expected to grow at a CAGR of 11.6% from 2026 to 2032.

Solar Airfield Lighting refers to solar-powered aviation ground lighting equipment used for runway, taxiway, apron, helipad, approach, threshold, runway end, obstruction, and temporary airfield applications. It typically integrates LED light sources, solar panels, rechargeable batteries, controllers, optical lenses, mounting structures, and sometimes wireless control systems, providing visual guidance for aircraft operation in airports, remote airstrips, military bases, emergency landing zones, and heliports without relying on conventional grid-connected cabling.

Demand is driven by the need for low-civil-work airfield lighting, faster installation, lower power infrastructure cost, airport decarbonization, and reliable operation in remote or underdeveloped regions where grid access is limited. Business opportunities are concentrated in small and regional airports, military temporary airfields, island and remote airstrips, heliports, emergency runway systems, and airport retrofit projects. Suppliers can create value through higher-efficiency solar modules, longer-life batteries, ICAO/FAA-compliant optics, wireless monitoring, modular portable kits, and turnkey solar airfield lighting systems.
