Solar distillation solutions are a type of water purification system that uses the energy from the sun to evaporate water and collect the vapor as pure, distilled water. This method relies on the natural process of evaporation and condensation to remove impurities and contaminants from the water, leaving behind clean and safe drinking water. Solar distillation solutions are particularly useful in areas where access to clean water is limited and traditional methods of water treatment are unavailable. The simplicity and low cost of these systems make them a sustainable and effective solution for improving access to clean drinking water in remote or resource-constrained communities.

The global Solar Distillation Solutions market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
