The solar electrical junction box is a connecting device between the solar cell array composed of solar cell components and the solar charging control device. The junction box is the shell on the module and is used to connect photovoltaic strings. A junction box is installed directly on the back of each PV panel by the photovoltaic (PV) manufacturer and serves as the interface between the conductor strips on the panel and the DC input and output cables. Its main function is to connect and protect solar photovoltaic modules, connect the electricity generated by solar cells with external lines, and conduct current generated by photovoltaic modules.

The global market for Solar Electrical Junction Boxes is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
