With growing demand in downstream market, the Solar Energy Plane is forecast to a readjusted size of US\$ 8192.2 million by 2030 with a CAGR of 9.6% during review period.

The research report highlights the growth potential of the global Solar Energy Plane market. Solar Energy Plane are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Solar Energy Plane. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Solar Energy Plane market.

Solar energy plane is a new type of aircraft powered by photovoltaic cells. Generally speaking, solar energy plane can travel longer, which can reach several months or even half a year. Compared to other aircraft, solar energy plane also travel at higher altitudes. Overall, solar energy plane is still a nascent industry, with only three companies currently developing and operating them commercially. The three companies, Solar Impulse, Airbus, and Skydweller Aero, are still in the development stage, and some have already passed the test flight stage, but they have not been sold or serviced.

China has implemented the Renewable Energy Law since 2006, in which Article 4 clearly states that, the State gives first priority to the exploration of renewable energy. Over the years, various departments of the Chinese government have successively issued a large number of policies, covering production, sales, taxation, subsidies and other aspects. After setting the carbon neutrality goal in 2021, from a national

perspective, the upgrading of the energy structure is ever imperative, and therefore the optoelectronic industry has great potential. The European Commission released the Net-Zero Industry Act in 2023. This bill aims to stimulate local manufacturing in Europe, reduce import dependence on China, and ensure that at least 40% of the EU's clean energy demand can be met by 2030. The EU targets an installed solar capacity of 600 GW. Overall, the European market still has a lot of room for development. US 2022 release of the Inflation Reduction Act, which includes \$369 billion for energy security and climate change investments. For the photovoltaic industry, the bill stimulates its development from multiple aspects such as corporate and individual tax credits, production subsidies, and loans throughout the industry chain, and revitalizes the domestic manufacturing industry in the United States. Japanese authorities plan to make solar panels mandatory for new residential buildings in Tokyo from 2025 onwards. It is estimated that by 2030, photovoltaic power generation will account for 14%-16% of Japan's total power generation, and the cumulative installed capacity of photovoltaic systems will be about 117.358 GW.
