Solar-powered appliances are being adopted owing to their benefits of use. The increasing need to replace conventional sources of power with renewables, and the need to reduce the use of chlorofluorocarbons (CFCs), a potent ozone-depleting agent, will result in the increased adoption of solar-powered refrigeration units. Around 20% of the average monthly electricity consumption is used for powering appliances such as oven and microwave.

The global Solar Freezer market size is projected to grow from US\$ 1414.3 million in 2023 to US\$ 1906.4 million in 2030; it is expected to grow at a CAGR of 4.4% from 2024 to 2030.

It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.378 GW.
