Solar mosquito lamps are outdoor insect control devices powered by integrated solar panels and rechargeable batteries, designed to attract and eliminate mosquitoes and flying insects through UV light attraction, electric grids, suction fans, or trapping mechanisms. These products are widely used in gardens, patios, campsites, farms, and outdoor residential areas, providing chemical-free pest control solutions. From a value chain perspective, upstream includes solar panel suppliers, lithium battery manufacturers, LED chip producers, plastic housing suppliers, and PCB manufacturers; midstream focuses on product assembly, circuit integration, waterproof sealing, safety testing, and branding; downstream demand comes from households, outdoor enthusiasts, agricultural users, and online retail platforms. In 2025, the average selling price of solar mosquito lamps is approximately US\$32.00 per unit, with global sales volume reaching around 96 million units. The industry maintains a gross margin of 35%-55%, supported by energy-saving positioning, seasonal demand peaks, and outdoor lifestyle expansion.
