Solar Mounting Rail is a fundamental structural component of a photovoltaic (PV) mounting system, designed to secure and support solar panels on rooftops, ground installations, or other structures. Typically made of aluminum alloy or galvanized steel, these rails provide a stable foundation by connecting with clamps, brackets, and fasteners, ensuring that solar modules remain firmly fixed under various environmental conditions such as wind, snow loads, and thermal expansion. Solar mounting rails not only bear the mechanical load of PV modules but also contribute to optimal panel alignment and long-term system durability, making them an essential element in both residential and commercial solar energy installations.
