The global Solar Photovoltaic Building Integration market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

'Photovoltaic building integration' developed earlier in developed countries, Europe and the United States and other developed countries have put forward the development goals of energy-saving buildings. The United States has proposed net zero energy consumption by 2030. Japan proposes building energy efficiency roadmap by 2030. The UK has proposed zero-carbon public buildings by 2019, and Germany has proposed near-zero-energy new buildings by 2020. Denmark proposes to reduce the annual cold and heat demand of residential buildings to 20kWh/ m² after 2020.

Photovoltaic building integration technology is the technology of integrating solar photovoltaic module power generation products into the building, that is, through the integration of the building, mainly roof and wall with photovoltaic power generation, so that the building itself uses solar energy to produce electricity to meet the needs of the building itself.
