Solar water systems usually refer to systems that use solar energy as the main energy source to provide hot water or perform water treatment. Solar water heaters or solar hot water projects collect solar heat through solar collectors, convert it into thermal energy, and transfer the heat to a water storage and insulation water tank through a control system to heat water. Solar water treatment systems use solar energy to improve water quality, convert solar energy into electrical energy or thermal energy through solar photovoltaic panels or thermal energy panels, and drive various water treatment equipment to complete the purification process.
