A solar backpack is a type of backpack that features integrated solar panels designed to harness sunlight and convert it into electricity. These backpacks typically have solar panels stitched onto their outer surfaces, allowing users to charge electronic devices such as smartphones, tablets, cameras, and portable power banks while on the go.

Solar backpacks are equipped with photovoltaic (PV) cells, which capture sunlight and generate direct current (DC) electricity. The electricity generated by the solar panels is then stored in a built-in battery pack or can be directly used to charge electronic devices through USB ports or other charging outlets.

Solar backpacks are designed for outdoor enthusiasts, travelers, commuters, students, and anyone else who needs a reliable power source while away from traditional power outlets. They provide a convenient and sustainable way to charge electronic devices during outdoor activities, travel, daily commutes, and emergencies.
