A solar-powered car fan is a device designed to ventilate a parked vehicle using solar energy. It typically consists of a small fan powered by a solar panel that is mounted on the car's window or dashboard. When sunlight hits the solar panel, it generates electricity, which powers the fan to expel hot air from the car's interior. This helps reduce the temperature inside the car, making it more comfortable when you return. It's an eco-friendly solution to keep your car cooler without relying on the vehicle's battery or AC system.

The global Solar Powered Car Fan market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
