The global Solar-powered Portable Power Devices market size is predicted to grow from US$ 1050 million in 2025 to US$ 1930 million in 2031; it is expected to grow at a CAGR of 10.7% from 2025 to 2031.

Solar-powered portable power devices are compact, mobile power sources that harness solar energy to generate electricity. These devices are equipped with solar panels, which are responsible for converting sunlight into direct current (DC) electricity through the photovoltaic effect. The generated DC power is then either stored in an internal rechargeable battery for later use or, in some cases, converted into alternating current (AC) power using an inverter for immediate application. Solar-powered portable power devices are designed to be easily carried and transported, making them ideal for various off-grid situations such as camping, hiking, emergency power backup, and use in remote areas where access to traditional power sources is limited. They come in a variety of sizes and power capacities, offering users the flexibility to charge a wide range of electronic devices, from smartphones and tablets to small appliances and even some power tools.

United States market for Solar-powered Portable Power Devices is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Solar-powered Portable Power Devices is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
