The global Solar-Powered Toilet market size is predicted to grow from US\$ 451 million in 2025 to US\$ 688 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

A solar-powered toilet is an environmentally friendly sanitation facility that uses solar energy as its primary energy source, suitable for areas without electricity or locations with high energy conservation needs. It collects solar energy through solar panels, stores it in batteries, and powers the toilet's lighting, ventilation, flushing, heating, and automatic cleaning systems. Some high-end models also feature wastewater treatment systems, intelligent monitoring, and remote management. In remote areas with no or unstable electricity, traditional toilets are difficult to operate. Solar-powered toilets achieve independent operation through clean energy, solving the problem of energy dependence while reducing carbon emissions and promoting sustainable development. The average price of this product is approximately US\$4,500 per unit, with global sales of approximately 102,000 units.

United States market for Solar-Powered Toilet is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
