Solar-powered Vaccine Refrigerators, also called off-grid photovoltaic (PV) systems, are employed to maintain a constant temperature suitable for storing vaccines in clinics. In solar-powered vaccine refrigerators, photovoltaic modules convert the solar energy directly into electricity, which is further employed to power the compressor of the vaccine refrigerator. On the other hand, rechargeable batteries are also employed to store electric energy. The charge controller regulates the flow of electricity to protect batteries from over-discharging and overcharging.
