Solar PV Mounting Systems is an important part of photovoltaic power station, and it plays a bearing role on photovoltaic modules. The main requirement is to ensure the safety, applicability and durability of the mounting system within the effective period of normal power generation of the photovoltaic system (more than 25 years). The safety is mainly reflected in the strength of the system to ensure that the system meets the requirements of wind load, snow load, and seismic load. The applicability is mainly reflected in the rigidity of the system, which can ensure that the system has sufficient resistance to deformation when subjected to force. Durability is mainly reflected in the ability of the system to withstand the environment for a certain period of time, such as oxidation resistance and corrosion resistance. In addition, the design of the support system should also consider the requirements of convenient installation and easy maintenance.
