The global Solar Rooftop Design Software market size is predicted to grow from US\$ 171 million in 2025 to US\$ 284 million in 2031; it is expected to grow at a CAGR of 8.8% from 2025 to 2031.

Solar rooftop design software simplifies the design of solar systems, allowing solar businesses to give consumers quick and accurate quotes. Some software allows users to model both the setup and performance of a future solar system. This simplifies and streamlines the engineering and sales processes, which is especially important for large-scale solar plants with challenging topographies. The app user enters the desired parameters, such as production capacity and the types of items to be used, and the system simulates the suggested setup while indicating potential barriers. With rich 3D presentations, solar businesses can make the greatest use of any terrain, minimize expenses, and increase sales.

China has implemented the Renewable Energy Law since 2006, in which Article 4 clearly states that, the State gives first priority to the exploration of renewable energy. Over the years, various departments of the Chinese government have successively issued a large number of policies, covering production, sales, taxation, subsidies and other aspects. After setting the carbon neutrality goal in 2021, from a national perspective, the upgrading of the energy structure is ever imperative, and therefore the optoelectronic industry has great potential. The European Commission released the Net-Zero Industry Act in 2023. This bill aims to stimulate local manufacturing in Europe, reduce import dependence on China, and ensure that at least 40% of the EU's clean energy demand can be met by 2030. The EU targets an installed solar capacity of 600

GW. Overall, the European market still has a lot of room for development. US 2022 release of the Inflation Reduction Act, which includes \$369 billion for energy security and climate change investments. For the photovoltaic industry, the bill stimulates its development from multiple aspects such as corporate and individual tax credits, production subsidies, and loans throughout the industry chain, and revitalizes the domestic manufacturing industry in the United States. Japanese authorities plan to make solar panels mandatory for new residential buildings in Tokyo from 2025 onwards. It is estimated that by 2030, photovoltaic power generation will account for 14%-16% of Japan's total power generation, and the cumulative installed capacity of photovoltaic systems will be about 117.258 GW.
