Solar Shading Systems is Shading against solar heat gain is the most readily applicable and flexible method of cooling and can be applied in all climate types in which the sun's influence is significant, and to almost all modern buildings irrespective of latitude. The key to good daylighting and thermal performance lies in the design of the building envelope. Shading devices can be an integral part of the envelope, and thus influence thermal and daylighting performance. They may be located at the external or internal face of the facade, or within double- and triple- glazed window or curtain wall systems. In each case solar radiation is prevented, wholly or partly, from entering the building. By intercepting solar radiation before it reaches the building, external devices are the most. They include motors to control the shades.

In China, Solar Shading Systems key players include Hunter Douglas, Warema, Lutron, Tryba, Kawneer, etc. China top five manufacturers hold a share over 15%.

In terms of product, Aluminum Solar Shading Systems is the largest segment, with a share over 70%. And in terms of application, the largest application is Public Building Shade Systems, followed by Residential Building Shade Facilities.
