The global Solar Water Pumps market size is predicted to grow from US\$ 1871 million in 2025 to US\$ 5888 million in 2031; it is expected to grow at a CAGR of 21.1% from 2025 to 2031.

Solar water pumps can supply water to locations which are beyond the reach of power lines. Commonly, such places relied on human or animal power or on diesel engines for their water supply. Solar water pumps can replace the current pump systems and result in both socio-economic benefits as well as climate related benefits. The water supplied by the solar water pump can be used to irrigate crops, water livestock or provide potable drinking water.

A solar water pump system is essentially an electrical pump system in which the electricity is provided by one or several Photovoltaic (PV) panels. A typical solar powered pumping system consists of a solar panel array that powers an electric motor, which in turn powers a bore or surface pump. The water is often pumped from the ground or stream into a storage tank that provides a gravity feed, so energy storage is not needed for these systems.

Global Solar Water Pumps key players include JNTech, JISL, Tata Power Solar, Grundfos, etc. Global top four manufacturers hold a share over 10%.

Asia Pacific is the largest market, with a share about 40%, followed by Europe, and North America, both have a share about 35 percent.

In terms of product, DC Surface Suction is the largest segment, with a share over 70%. And in terms of application, the largest application is Agriculture, followed by Drinking

Water, etc.
