The solar water purification system is a device that uses solar energy as the main energy source and combines filtration equipment, ultraviolet light and other technologies to purify poor water quality. Its core principle is to absorb solar energy through solar collector panels, convert light energy into thermal energy, and then use this thermal energy to heat water to the boiling point to generate steam, which can be condensed to purify the water. During this process, harmful substances, microorganisms and bacteria in the water will be killed or decomposed, thereby achieving the purpose of purifying water quality.

The global Solar Water Purification System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
