The global Soldering Robot market size is predicted to grow from US\$ 230 million in 2025 to US\$ 323 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

Soldering robot is a machine to finish Soldering. Soldering is a process in which two or more items (usually metal) are joined together by melting and putting a filler metal (solder) into the joint, the filler metal having a lower melting point than the adjoining metal. Soldering differs from welding in that soldering does not involve melting the work pieces. In brazing, the filler metal melts at a higher temperature, but the work piece metal does not melt. In the past, nearly all solders contained lead, but environmental and health concerns have increasingly dictated use of lead-free alloys for electronics and plumbing purposes.

Japan is the largest Soldering Robot market with about 46% market share. China is follower, accounting for about 40% market share.

The key players are Japan Unix, Quick, Apollo Seiko, Tsutsumi Electric, HAKKO, Janome, Cosmic, Unitechnologies, Flex Robot etc. Top 5 companies occupied about 47% market share.
