Soldier Ad-hoc Network Radio is a kind of wireless communication device specially designed for individual soldier operations or team collaboration. It has the following features: small size, light weight, equipped with a high-capacity detachable battery, convenient for individual soldiers to carry on their backs and free their hands. It supports decentralized, dynamic networking, anti-interference and multi-hop relay functions, and can quickly build a temporary and dynamic wireless IP network. This network has self-organization, self-recovery and high anti-destruction capabilities, and can support multi-hop transmission of multimedia services such as data, voice and video. It is suitable for military, emergency, border defense, anti-terrorism and other scenarios. For instance, on the battlefield, it can assist individual soldiers, tactical teams, and even tactical police dogs in achieving multimedia communication services such as voice group calls, video backhaul, and relay transmission, thereby enhancing the efficiency of collaborative operations. In addition, individual soldier AD hoc network radio stations can also be combined with unmanned aerial vehicles (UAVs), using UAVs as air relay nodes to expand the communication range and enhance the flexibility and reliability of communication.
