The global Solenoid Diaphragm Pump market size is predicted to grow from US$ 862 million in 2025 to US$ 1080 million in 2031; it is expected to grow at a CAGR of 3.8% from 2025 to 2031.

Solenoid diaphragm pump is a type of pump that uses electromagnetic force to drive a diaphragm to reciprocate, thereby achieving liquid transportation. It consists of key components such as an electromagnet, diaphragm, pump body, and check valves. When the electromagnet is energized, it generates a magnetic field that attracts one side of the diaphragm, causing it to move towards the inside of the pump body, creating a vacuum area that draws liquid into the pump. When the electromagnet is de-energized, the diaphragm returns to its original position due to its own elasticity, discharging the liquid from the pump body. This pump has advantages such as strong self-priming ability, corrosion resistance, no leakage, and easy maintenance. Solenoid diaphragm pumps are widely used in industries such as chemicals, pharmaceuticals, food processing, and environmental protection for transporting various corrosive, viscous, flammable, explosive, or toxic liquids. Their reliable performance and versatility make them indispensable equipment in many industrial processes.

United States market for Solenoid Diaphragm Pump is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
