The global Solenoid Pilot Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The solenoid pilot valve is a device that uses electromagnetic force to control the opening and closing of the valve. Its working principle is to attract the valve core through the electromagnet, causing the pressure in the pilot chamber to change, thereby affecting the pressure in the main chamber, thereby controlling the on-off of the valve. The solenoid pilot valve has the following characteristics: the upper limit of the fluid pressure range is high, and it can be installed arbitrarily (customization is required) but it must meet the fluid pressure difference conditions. Pilot diaphragm structure, low power consumption. Suitable for liquid, water, hot water, gas, oil, gas and other media.

United States market for Solenoid Pilot Valve is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
