A solenoid valve for appliances is an electromechanically operated valve designed to control the flow of liquids or gases in household or commercial devices such as washing machines, dishwashers, coffee makers, water purifiers, and HVAC systems. It typically consists of a coil (the solenoid), a plunger, and a valve body. When the coil is energized, the magnetic field moves the plunger to open or close the valve, allowing for precise, automated control of fluid or air flow within the appliance.

These valves are valued for their reliability, compact size, and fast response time. They are usually two-way or three-way types, made from materials like plastic, brass, or stainless steel, depending on the medium and appliance requirements. Many solenoid valves in appliances are designed for low power consumption, long service life, and resistance to scale and corrosion.
