The global Solenoid Valve Block Air Supply System market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The Vehicle Integrated Solenoid Valve Block Air Supply System is one of the core components of the air suspension system and is responsible for controlling the distribution of airflow between the compressor, air reservoir and air springs. Through the solenoid block, the system is able to precisely adjust the vehicle's body height, balance and suspension stiffness, thereby improving driving comfort and handling.

Today the majority of new cars in the luxury and upper middle class range, including some Sport Utility Vehicles (SUVs) , have air suspension. The volume of the air in the air cushions in all corners of the car can be controlled. This is done by controlling the flow of the air in and out of the additional air reservoirs. The system includes a special air compressor, one or two air reservoirs, four shock absorber units with air springs and traditional shock absorbers, 2 to 5 stand-alone accelerometers and the electronic control unit (ECU) .
