The global Solid Aluminium Capacitors market size is predicted to grow from US\$ 6065 million in 2025 to US\$ 9358 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2025, global sales volume of solid aluminum capacitors is estimated at approximately 52 billion units, with an average selling price of around USD 0.11 per unit. Solid aluminum capacitors are aluminum electrolytic capacitor products that replace conventional liquid electrolytes with solid electrolyte systems such as conductive polymers, typically combined with SMD packaging technology to achieve lower ESR, higher ripple current capability, and longer operational lifetime. Compared with traditional liquid aluminum electrolytic capacitors, they offer significantly improved reliability, thermal stability, high-frequency performance, and lifetime characteristics, and are widely used in consumer electronics, communication systems, data center servers, industrial control systems, and automotive electronics, with ongoing trends toward higher reliability, miniaturization, and automotive-grade applications.

From a market structure perspective, solid aluminum capacitors represent a high-reliability upgrade segment within the aluminum electrolytic capacitor industry, driven by consumer electronics miniaturization and performance upgrades, 5G infrastructure deployment, increasing power density in AI data centers, and automotive electronics architecture evolution. Server and data center power systems remain the primary application segment, followed by communication power modules and consumer electronics power management systems, while EV-related applications such as OBC, DC-DC converters, and domain controllers are emerging as important growth drivers. Core technological barriers include electrolyte system design, low ESR control, high ripple current capability, long lifetime reliability validation, and packaging consistency,

leading to relatively high industry concentration dominated by manufacturers in Japan, South Korea, Taiwan, and mainland China. Although facing substitution pressure from MLCC, tantalum polymer capacitors, and hybrid capacitors, this product remains competitive in medium-to-high capacitance, low ESR, and high ripple current applications, especially in AI server power systems and industrial high-reliability systems. Future growth will be driven by AI infrastructure expansion, increased automotive electronics penetration, and widespread adoption of high-frequency switching power supplies.
