The global Solid Biofuel Testing Service market size is predicted to grow from US\$ 293 million in 2025 to US\$ 431 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Solid biofuel testing service encompasses a range of professional laboratory analyses, on-site assessments, and technical consulting services. These services aim to systematically determine and evaluate the physical properties, chemical composition, combustion performance, and environmental indicators of solid fuels produced from biomass for energy production. The core demand stems from the rigid requirements of energy structure transformation, increasingly stringent environmental regulations, and the standardization of biomass fuel trade. The demand primarily arises from: 1) Trade settlement and risk management needs: Global biomass fuel trade uses indicators such as calorific value as the core pricing basis. Both buyers and sellers need impartial testing to ensure fair transactions and avoid commercial disputes; 2) Combustion equipment operation and safety needs: Power plants and heating companies require accurate fuel characteristic data (such as ash fusion characteristics and chlorine content) to optimize combustion, prevent equipment corrosion and slagging, and ensure operational safety. Upstream is the technology and standards supply link, including manufacturers of testing instruments and reagents, international/national standards-setting organizations, and method development institutions. Downstream is the data application and decision-making link, covering fuel producers and traders (for product quality control and sales documentation), end users (power plants and factories for fuel acceptance and operational optimization), and regulators and financial institutions (for policy compliance review and green finance support). In 2025, the average selling price of solid biofuel testing services will be approximately US\$500, with a gross profit margin of approximately 40%.
