Solid Control Screw Conveyor is one of the key equipment in the solid control system. It is mainly used to transport and separate the solid phases (such as drill cuttings, sand particles, etc.) in the drilling fluid during the process of oil drilling. Its working principle is to push the solid phases in the drilling fluid along the conveyor pipeline by the rotating spiral blades, thereby achieving the separation of solid phases from the liquid phase. It can be widely applied in oil drilling, shale gas extraction, and environmental protection fields, and plays an important role especially in the treatment of drilling fluid waste and the transportation of drill cuttings.
