The global Solid Density Balance market size is predicted to grow from US\$ 139 million in 2025 to US\$ 179 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

A solid density balance is an instrument that calculates the density of a solid by measuring its mass (or weight) in air and its buoyancy effect in water (or other liquids of known density). This balance uses the Archimedean principle (i.e. the principle of buoyancy) to indirectly determine the density of a solid by comparing the mass difference of the solid in air and liquid. It combines modern electronic technology and precision mechanical design to accurately and quickly measure the density of solids.
