Solid Grade Thermoplastic Acrylic Beads Resin refers to a family of thermoplastic polymers based predominantly on methyl methacrylate (MMA) and other acrylate monomers, produced via suspension polymerization into spherical, free-flowing bead particles with controlled particle size distribution ranging from microns to millimeters. In 2025, global solid grade thermoplastic acrylic beads resin production reached approximately 329K ton, with an average global market price of around USD 4,800 per ton. A factory gross profit of USD 1,296 per ton with 27% gross margin. A single line full machine capacity production is around 2K ton per line per year. The upstream is dependent on Methyl Methacrylate, monomers and solvents. The downstream demand is concentrated in coatings and paints, adhesives and sealants and composite resins. Thermoplastic acrylic solid resin dissolved in solvent systems applied as protective conformal coatings on printed circuit boards, protecting against moisture, dust, chemicals, and temperature extremes. India market is driven by manufacturing expansion and construction growth. China market is driven by rapid infrastructure and EV growth.
