The global Solid Insulation Ring Main Unit market size is predicted to grow from US\$ 1969 million in 2025 to US\$ 2846 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

A Solid Insulation Ring Main Unit (RMU) is a type of compact switchgear used in medium-voltage electrical distribution networks. It serves the purpose of distributing electrical power from a primary source to various secondary circuits, such as residential, commercial, or industrial areas. The 'solid insulation' aspect of this RMU refers to the use of solid dielectric materials, typically epoxy resin or silicone rubber, instead of traditional liquid or gas insulating mediums like oil or SF6 (sulfur hexafluoride).

The need for compact and space-saving solutions in urban and densely populated areas continued to drive the demand for Solid Insulation RMUs. These units are ideal for locations with limited space, such as city centers.
