The global Solid Magnesium Tert Butoxide market size is predicted to grow from US\$ 56.78 million in 2025 to US\$ 77.13 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Solid magnesium tert butoxide refers to magnesium tert butoxide delivered in solid form such as powder, crystal, or particle. It belongs to metal alkoxide organic metal compounds and is usually prepared by reacting magnesium metal with tert butanol under anhydrous and inert conditions. It has strong hygroscopicity and can decompose into tert butanol and form magnesium as an alkaline substance when in contact with water. At the same time, it is easily affected by carbon dioxide and produces carbonate impurities. Therefore, it needs to be sealed and moisture-proof, and stored and operated under inert gas protection; Its main use is as an alkaline reagent or magnesium source in organic synthesis and fine chemical engineering, used in reaction systems such as alkoxide exchange, ester exchange, and condensation. It can also be used as a precursor for metal alkoxide in certain catalytic systems and material synthesis. The solid form is characterized by high effective content and easy precise feeding by equivalent, but requires higher requirements for anhydrous operation and safety compliance management. In 2025, global Solid Magnesium Tert Butoxide production reached approximately 5.11 K MT, with an average global market price of around US\$ 11,359 per MT.

The annual production capacity of solid magnesium tert butoxide is 7,000 tons, with a gross profit margin of about 30%.

The upstream mainly includes metal magnesium or high-purity magnesium sources, tert butanol and necessary solvent systems, reaction catalysis and activation aids, inert gas

nitrogen or argon, drying and dehydration consumables, depreciation and maintenance of closed filtration and drying equipment, as well as moisture-proof lining and sealed packaging materials and hazardous chemical storage and transportation services.

The downstream mainly enters pharmaceutical and pesticide intermediates and fine chemical synthesis as alkaline reagents or magnesium sources to participate in alkoxide exchange, condensation, and conversion reactions. It is also used in some catalytic systems and material synthesis as magnesium alkoxide precursors. The customers are mostly pharmaceutical and chemical plants, agrochemical enterprises, fine chemical plants, as well as reagent and distribution channels with anhydrous inert operation capabilities.

The cost of raw materials usually accounts for 60% to 80% of the total cost, manufacturing expenses account for about 8% to 15%, packaging and hazardous chemical logistics account for about 6% to 15%, quality inspection and document system and manual management account for about 5% to 12%, and environmental safety compliance and loss disposal account for about 2% to 6%.

United States market for Solid Magnesium Tert Butoxide is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
