## **Abstracts**

The global Solid and Hazardous Waste Management Services market size is predicted to grow from US\$ 7602 million in 2025 to US\$ 11976 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Solid and hazardous waste management services refer to an integrated environmental service system that provides industrial solid waste, hazardous waste, and special waste, encompassing collection, sorting, transfer, storage, harmless treatment, and resource utilization. The core objective is to reduce environmental risks and meet regulatory compliance requirements. This service is widely used in the chemical, pharmaceutical, electronics, metallurgical, energy, manufacturing, and municipal environmental protection sectors, and is an indispensable basic public service in modern industrial systems. From a supply chain perspective, the upstream mainly relies on environmental protection equipment, transport vehicles, impermeable materials, incineration and landfill facilities, and information management systems; the midstream consists of professional waste management service providers offering operational and technical services; and downstream clients include industrial enterprises, municipal agencies, and public utilities. From a demand and opportunity perspective, increasingly stringent environmental regulations, increased industrial output, and the growing variety of hazardous waste from new materials and new energy industries are continuously driving up the demand for compliant treatment. Future development directions lie in efficient incineration, resource recovery, digital traceability management, and improved comprehensive environmental service capabilities, with further room for growth in industry concentration and service prices.
