Abstracts

The global Solid Particle Deicer market size is predicted to grow from US$ 634 million in 2025 to US$ 744 million in 2031; it is expected to grow at a CAGR of 2.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Solid deicers are granules that vary in size, shape, coarseness, and chemical or mineral composition. They contain freeze point depressants that lower the freezing point of water. Deicers are applied to walkways and roads to penetrate ice and snow, form brine, and melt ice that has already bonded with the pavement.

The development trend of solid de-icers is being driven by stricter environmental regulations, frequent extreme weather in winter, upgraded infrastructure maintenance needs, and breakthroughs in new material technologies. Traditional chloride-based (such as sodium chloride, calcium chloride) solid de-icers are facing replacement pressure due to their corrosiveness to roads, vehicles and the environment, driving the market to transform to environmentally friendly products, such as low-corrosive organic salts such as potassium acetate (KAc) and sodium formate (NaFo), as well as compound formulas with added corrosion inhibitors or biodegradable ingredients. The increase in extreme snowfall events (such as North America, Northern Europe and high-latitude areas in Asia) has stimulated the demand for emergency reserves of de-icers on airport runways, highways and urban roads, while emerging application scenarios such as high-speed rail tracks and wind turbine blades have further expanded the market space. In the future, solid de-icers will develop in the direction of high efficiency and low carbon, precise controlled release and multifunctional integration (such as ice melting + antifreeze + road protection), but cost pressure (high prices of environmentally

friendly materials) and long-term performance verification are still bottlenecks for popularization.
