The global Solid Polymer Aluminum Electrolytic Capacitor market size is predicted to grow from US$ 1324 million in 2025 to US$ 1603 million in 2032; it is expected to grow at a CAGR of 2.8% from 2026 to 2032.

Solid polymer aluminum electrolytic capacitors are capacitors that use a polymer electrolyte (conductive polymer) as an electrolyte and have excellent performance and a wide range of applications.

Solid aluminum electrolytic capacitors are also called polymer solid aluminum electrolytic capacitors, solid aluminum electrolytic capacitors, etc. Different from traditional liquid aluminum electrolytic capacitors (whose dielectric material is electrolyte), solid aluminum electrolytic capacitors use conductive polymer products as dielectric materials, which can greatly improve the stability and safety of the product, but the manufacturing cost is relatively high. Solid aluminum electrolytic capacitor products were initially mainly used in the field of consumer electronics, and gradually penetrated into various industrial products/equipment fields. In the field of consumer electronics applications, with the increase in demand for high-tech electronic products, the requirements for the quality, heat resistance and stability of electronic components are also higher. In conjunction with Intel's promotion of the 775-pin CPU strategy, the high-end motherboard manufacturing industry has gradually changed from the traditional liquid aluminum electrolytic capacitors used in the past to solid aluminum electrolytic capacitors that are resistant to high temperatures and have a long life. The demand for notebook computers, LCDs, TVs, 3D monitors, game consoles and other application markets has increased significantly, and solid aluminum electrolytic capacitors have also become one of the most growing products in passive components in recent years; in the field of industrial applications, solid aluminum electrolytic capacitors are mainly

used in industrial communication power supplies, professional inverters, CNC and servo systems, wind power and other new energy power generation, automotive electronics and other fields. Among them, the automotive electronics and new energy power generation markets have been developing rapidly in recent years, driving the rapid growth of the market demand for solid aluminum electrolytic capacitors. At present, the solid aluminum electrolytic capacitor industry is mainly used in the manufacturing markets of consumer electronics, lighting, automotive electronics, etc., and China has become the main consumer market for the global solid aluminum electrolytic capacitor industry based on its huge industrial manufacturing base. However, judging from the application proportion of solid aluminum electrolytic capacitors in the entire aluminum electrolytic capacitor industry, it is still at a relatively low level, and liquid aluminum electrolytic capacitors are still the absolute mainstream consumer products.
