The global Solid Polysulfide Rubber market size is predicted to grow from US$ 6317 million in 2025 to US$ 8642 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Solid Polysulfide Rubber (SPR) is a synthetic elastomer derived from liquid polysulfides that is characterized by excellent resistance to fuels, oils, solvents, ozone, and weathering, along with strong impermeability to gases, making it widely used in sealants, gaskets, adhesives, protective coatings, and specialty rubber products. Its supply chain begins with petrochemical-based raw materials such as sodium polysulfide and organic dichlorides, which are polymerized into liquid polysulfides and then cured or compounded with fillers, plasticizers, and stabilizers to form solid rubber grades. Production is concentrated among specialized chemical and rubber manufacturers, which supply to downstream sectors including aerospace, automotive, construction, marine, and electronics, where the material is valued for durability in harsh environments and long service life. The global Solid Polysulfide Rubber market produces about 1,300 kilotons annually, supported by a capacity of nearly 1,500 kilotons per year. The industry maintains an average profit margin of around 30%, with prices ranging from USD 4,200 to 7,800 per ton depending on the grade.

United States market for Solid Polysulfide Rubber is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
